

Abstract of the Disclosure

Multi-purpose Kitchen Utensil with a flat spatula member that incorporates the elements of a standard spatula, a knife and a grater. A first and second pair of handle members are joined to each other at one end. The first handle member terminates at its opposite end in a scoop member. The second handle member terminates at its opposite end in the flat spatula member. The handle member is foldable at the joined junction so that the handles rest on top of each other and the spatula member rests intimately on the top perimeter of the scoop. The first and second handle members have hollowed portions to allow for the storage of a plurality of kitchen tools . A preferred embodiment includes an elastic cord member that hingedly attaches the first handle member to the second handle member.
